[**Max. Marks : 100**

Qn. Nos.	Value Points	Total
	PART - B (CHEMISTRY)	
VI.	Multiple choice :	$2 \times 1 = 2$
17.	The metal that displaces copper from copper sulphate solution is (A) mercury (B) gold (C) iron (D) silver Ans. : (C) iron	1

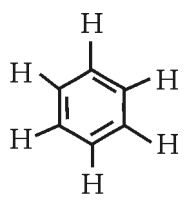

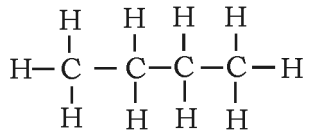

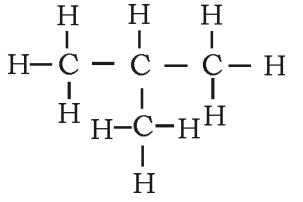

Qn. Nos.	Value Points	Total
18.	Number of single bonds found in the molecular structure of propanal is (A) 8 (B) 6 (C) 7 (D) 5 Ans. : (A) 8	1
VII.	Answer the following question :	$1 \times 1 = 1$
19.	State the modern periodic law. Ans. : 'The properties of elements are periodic functions of their atomic numbers.'	1
VIII.	Answer the following questions :	$5 \times 2 = 10$
20.	Draw the diagram of the arrangement of apparatus used to show the electrolysis of water and label the 'graphite rod'. Ans. : Electrolysis of water :	
		$1\frac{1}{2} + \frac{1}{2}$ 2

Qn. Nos.	Value Points	Total
21.	<p>The chemical reaction that takes place between sodium sulphate and barium chloride is called double displacement reaction. Why ? Write the balanced chemical equation for this reaction.</p> <p style="text-align: center;">OR</p> <p>What is the type of chemical reaction in which quicklime is obtained by lime stone (calcium carbonate) ? Write a chemical equation for this reaction.</p> <p><i>Ans. :</i></p> <p>There is an exchange of ions between the reactants sodium sulphate and barium chloride. 1</p> $\text{Na}_2\text{SO}_4 + \text{BaCl}_2 \longrightarrow \text{BaSO}_4 + 2\text{NaCl}.$ 1 <p style="text-align: center;">OR</p> <p>Decomposition reaction or thermal decomposition reaction / endothermic reaction. 1</p> $\text{CaCO}_3 \xrightarrow{\text{Heat}} \text{CaO} + \text{CO}_2$ 1 <p>(lime stone) (quick lime) 2</p>	2
22.	<p>Balance the following chemical equations :</p> <p>i) $\text{Fe} + \text{H}_2\text{O} \longrightarrow \text{Fe}_3\text{O}_4 + \text{H}_2$</p> <p>ii) $\text{Al} + \text{Cl}_2 \longrightarrow \text{AlCl}_3$</p> <p><i>Ans. :</i></p> <p>i) $3\text{Fe} + 4\text{H}_2\text{O} \longrightarrow \text{Fe}_3\text{O}_4 + 4\text{H}_2$ 1</p> <p>ii) $2\text{Al} + 3\text{Cl}_2 \longrightarrow 2\text{AlCl}_3$ 1</p>	2

Qn. Nos.	Value Points	Total														
23.	<p>Write any two uses of bleaching powder.</p> <p>Ans. :</p> <p>Bleaching powder is used</p> <p>i) for bleaching cotton and linen in the textile industry for bleaching wood pulp in paper industries and for bleaching washed cloths in laundry.</p> <p>ii) as an oxidising agent in many chemical industries</p> <p>iii) to make drinking water free from germs. (Any two)</p>	2														
24.	<p>Write any two differences between the physical properties of metals and non-metals.</p> <p>Ans. :</p> <table border="1" data-bbox="252 958 1321 1552"> <thead> <tr> <th data-bbox="252 958 786 1025"><i>Metals</i></th> <th data-bbox="786 958 1321 1025"><i>Non-metals</i></th> </tr> </thead> <tbody> <tr> <td data-bbox="252 1025 786 1149">i) They have shining surface</td> <td data-bbox="786 1025 1321 1149">i) They do not have shining surface</td> </tr> <tr> <td data-bbox="252 1149 786 1216">ii) Hard</td> <td data-bbox="786 1149 1321 1216">ii) Soft / brittle except diamond</td> </tr> <tr> <td data-bbox="252 1216 786 1283">iii) Malleable and ductile</td> <td data-bbox="786 1216 1321 1283">iii) Neither malleable nor ductile</td> </tr> <tr> <td data-bbox="252 1283 786 1350">iv) Good conductors of heat</td> <td data-bbox="786 1283 1321 1350">iv) Bad conductors of heat</td> </tr> <tr> <td data-bbox="252 1350 786 1473">v) Good conductors of electricity</td> <td data-bbox="786 1350 1321 1473">v) Non-conductors of electricity except graphite</td> </tr> <tr> <td data-bbox="252 1473 786 1552">vi) Sonorous</td> <td data-bbox="786 1473 1321 1552">vi) Non-sonorous</td> </tr> </tbody> </table> <p>(Any two) — 1 + 1</p>	<i>Metals</i>	<i>Non-metals</i>	i) They have shining surface	i) They do not have shining surface	ii) Hard	ii) Soft / brittle except diamond	iii) Malleable and ductile	iii) Neither malleable nor ductile	iv) Good conductors of heat	iv) Bad conductors of heat	v) Good conductors of electricity	v) Non-conductors of electricity except graphite	vi) Sonorous	vi) Non-sonorous	2
<i>Metals</i>	<i>Non-metals</i>															
i) They have shining surface	i) They do not have shining surface															
ii) Hard	ii) Soft / brittle except diamond															
iii) Malleable and ductile	iii) Neither malleable nor ductile															
iv) Good conductors of heat	iv) Bad conductors of heat															
v) Good conductors of electricity	v) Non-conductors of electricity except graphite															
vi) Sonorous	vi) Non-sonorous															
IX.	<p>Answer the following questions :</p>	3 × 3 = 9														
25.	<p>Draw the diagram of arrangement of the apparatus to show the reaction of zinc granules with dilute sulphuric acid and testing hydrogen gas by burning. Label the following parts :</p> <p>i) Zinc granules</p> <p>ii) Soap solution.</p>															

Qn. Nos.	Value Points	Total
	<p>Ans. :</p>  <p>Reaction of zinc granules with dilute sulphuric acid and testing hydrogen gas by burning.</p>	<p>2 + 1</p> <p>3</p>
26.	<p>a) What is neutralisation reaction ? Give an example.</p> <p>b) What is the common name of the compound that has molecular formula $\text{CaSO}_4 \cdot \frac{1}{2} \text{H}_2\text{O}$.</p> <p>Ans. :</p> <p>a) Reaction between acids and bases to form salt and water is called neutralisation reaction.</p> <p style="text-align: center;">OR</p>	<p>1</p> <p>3</p>

Qn. Nos.	Value Points	Total
27.	Base + Acid \longrightarrow Salt + water. <i>Ex:</i> $\text{NaOH} + \text{HCl} \longrightarrow \text{NaCl} + \text{H}_2\text{O}$. [Consider any suitable example]	1
	b) Calcium sulphate hemihydrate or Plaster of Paris.	1
	Write the two reasons for placing oxygen and sulphur in a same group of modern periodic table. Which one of these elements has larger atomic size and why ? [Atomic number of oxygen = 8, Atomic number of sulphur = 16] OR Write the limitations of Mendeleev's periodic table. Why is silicon called metalloid ? <i>Ans. :</i> <ul style="list-style-type: none"> ★ They have same chemical properties. 1 ★ They have same valence electrons / they have similar electronic configuration in outermost shell. 1 ★ Sulphur has larger atomic size because atomic size increases down the group / New shells are being added as we go down the group. This increases the distance between outermost electron and the nucleus. 1 OR Limitations of Mendeleev's classification : <ul style="list-style-type: none"> ★ No fixed position was given to hydrogen ★ No fixed position was given to isotopes of all elements ★ The atomic masses from one element to the other do not increase in a regular manner ★ It is not possible to predict how many elements could be discovered between two elements. 2 Silicon is called metalloid because it exhibits some properties of both metals and non-metals. 1	3

X.	Answer the following question : 1 × 4 = 4													
28.	<p>a) Write any two differences between saturated and unsaturated carbon compounds.</p> <p>b) Write the structural formula of the following carbon compounds :</p> <p>i) Benzene</p> <p>ii) Butane</p> <p>Ans. :</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">a) Saturated carbon compounds</th> <th style="width: 50%;">Unsaturated carbon compounds</th> </tr> </thead> <tbody> <tr> <td>i) Single bond exists between two consecutive carbon atoms</td> <td>i) Double and triple bond exists</td> </tr> <tr> <td>ii) Less reactive</td> <td>ii) More reactive</td> </tr> <tr> <td>iii) Give clean flame when they burnt</td> <td>iii) Give yellow / black flame</td> </tr> <tr> <td>iv) Subjected to substitution reaction</td> <td>iv) Subjected to both addition and substitution reactions</td> </tr> <tr> <td>v) Ex. : Alkanes, cycloalkanes etc.</td> <td>v) Ex. : Alkenes, alkynes, benzene etc.</td> </tr> </tbody> </table> <p style="text-align: right;">(Any two) — 1 + 1</p> <p>b)  1</p> <p style="text-align: center;">Benzene</p> <p style="text-align: center;">  OR  </p> <p style="text-align: center;">Butane 1</p>	a) Saturated carbon compounds	Unsaturated carbon compounds	i) Single bond exists between two consecutive carbon atoms	i) Double and triple bond exists	ii) Less reactive	ii) More reactive	iii) Give clean flame when they burnt	iii) Give yellow / black flame	iv) Subjected to substitution reaction	iv) Subjected to both addition and substitution reactions	v) Ex. : Alkanes, cycloalkanes etc.	v) Ex. : Alkenes, alkynes, benzene etc.	2
a) Saturated carbon compounds	Unsaturated carbon compounds													
i) Single bond exists between two consecutive carbon atoms	i) Double and triple bond exists													
ii) Less reactive	ii) More reactive													
iii) Give clean flame when they burnt	iii) Give yellow / black flame													
iv) Subjected to substitution reaction	iv) Subjected to both addition and substitution reactions													
v) Ex. : Alkanes, cycloalkanes etc.	v) Ex. : Alkenes, alkynes, benzene etc.													

Qn. Nos.	Value Points	Total
XI.	Answer the following question :	$1 \times 5 = 5$
29.	a) Explain the formation of ionic bond between sodium atom and chlorine atom. [Atomic number of sodium is 11, Atomic number of chlorine is 17] b) List any four general properties of ionic compounds.	
	<p>Ans. :</p> <p>a) Electronic configuration of sodium atom is 2, 8, 1 Electronic configuration of chlorine atom is 2, 8, 7 To have stable octet configuration sodium loses its one valence electron, thus forms sodium cation (Na^+) and chlorine receives one electron to its valence shell, thus forms chloride anion (Cl^-). Due to the electrostatic force between oppositely charged Na^+ and Cl^- ions sodium chloride (NaCl) forms. [1 + 1 + 1]</p> <p style="text-align: center;">OR</p> $\begin{array}{lcl} \text{Na} & \longrightarrow & \text{Na}^+ + \text{e}^- & 1 \\ 2, 8, 1 & & 2, 8 & \end{array}$ $\begin{array}{lcl} \text{Cl} + \text{e}^- & \longrightarrow & \text{Cl}^- & 1 \\ 2, 8, 7 & & 2, 8, 8 & \end{array}$ $\text{Na} + \cdot \text{Cl}^* \longrightarrow (\text{Na}^+) \left[\begin{array}{c} \cdot \cdot \cdot \\ \cdot \text{Cl}^* \\ \cdot \cdot \cdot \end{array} \right] \quad 1$	
	b) Properties of ionic compounds : i) Generally solids ii) Generally brittle and breaks into pieces when pressure is applied. iii) They have high melting and boiling points. iv) Soluble in water and not soluble in organic solvents. v) They do not conduct electricity in solid state / good conductors in molten or aqueous state.	
	(Any four)	$4 \times \frac{1}{2} = 2$
