ಕರ್ನಾಟಕ ಪ್ರೌಢ ಶಿಕ್ಷಣ ಪರೀಕ್ಸಾ ಮಂಡಳಿ, ಮಲ್ಲೇಶ್ವರಂ, ಬೆಂಗಳೂರು – 560 003

KARNATAKA SECONDARY EDUCATION EXAMINATION BOARD, MALLESWARAM, BANGALORE - 560 003

ಎಸ್.ಎಸ್.ಎಲ್.ಸಿ. ಪರೀಕ್ಷೆ, ಜೂನ್ – 2017

S. S. L. C. EXAMINATION, JUNE, 2017

ಮಾದರಿ ಉತ ರಗಳು

MODEL ANSWERS

ಸಂಕೇತ ಸಂಖ್ಯೆ : 83-E (Bio)

CODE NO. : 83-E (Bio)

ದಿನಾಂಕ : 21. 06. 2017] Date : 21. 06. 2017]

ವಿಷಯ : ವಿಜ್ಞಾನ

Subject : SCIENCE

(ಜೀವಶಾಸ್ತ್ರ / Biology)

(ಹೊಸ ಪಠ್ಯಕ್ರಮ / New Syllabus)

(ಪುನರಾವರ್ತಿತ ಖಾಸಗಿ ಅಭ್ಯರ್ಥಿ / Private Repeater)

(ಇಂಗ್ಲಿಷ್ ಭಾಷಾಂತರ / English Version)

[ಗರಿಷ್ಠ ಅಂಕಗಳು : 100

[Max. Marks : 100

Qn. Nos.	Value Points	Total
3.	The distribution of taste buds in the human tongue is shown in this	
	figure. The part labelled as '1', senses this taste.	
	Ans. : (B) Bitter	1
	PR-S-12030(BIO)	furn over

Qn. Nos.	Value Points	Total		
5	When Mendel crossed pure varieties of a tall plant with red flowers and a dwarf plant with white flowers, the number of dwarf plants with white flowers obtained in F_1 generation is			
	Ans. : (A) 0	1		
7.	If the number of blood cells present in 1 mm^3 blood of a healthy person is written in the increasing order, then the correct order obtained is			
	Ans. : (D) White blood cells, platelets, red blood cells	1		
9.	The disease Syphilis is caused by the bacterium			
	Ans. : (C) Treponema pallidum	1		
12.	Effluents coming from furnaces of the industries must be cooled to			
	atmospheric temperature before releasing into water bodies. Why ?			
	Ans. :			
	To prevent the death of aquatic life due to the thermal shock.			
	OR	1		
. –	To prevent thermal pollution.	1		
15.	Moss plants do not grow to greater heights. Why ?			
	Ans. :			
	Due to the absence of vascular tissues (or) due to the absence of xylem and phloem tissues)	1		
19.	Explain the structure of male and female cones of gymnosperms.			
	Ans. :			
	* Male cones contain microsporophylls. $\frac{1}{2}$			
	★ These produce microspores that have male gametes. $\frac{1}{2}$			
	★ Female cones contain megasporophylls. $\frac{1}{2}$			
	★ These produce female gametes. $\frac{1}{2}$	2		
20.	List any four characteristic features of fishes.			
	OR	2		
	List any four characteristic features of reptiles.

-------	---

Qn. Nos.	Value Points	Total
	 Ans.: ★ The streamlined body has an exoskeleton composed of dermal scales. \$\frac{1}{2}\$ ★ Locomotor structures are in the form of paired and unpaired fins. \$\frac{1}{2}\$ ★ Gills are the respiratory organs. \$\frac{1}{2}\$ ★ Heart is two chambered with one auricle and one ventricle. \$\frac{1}{2}\$ \$\text{Nervous system has a brain, a spinal cord and ten pairs of cranial nerves. \$\text{Volparous. Both fertilization and development are external.}\$ \$\text{Cold blooded animals.}\$ 	2
	 Body is divisible into head, trunk and short tail. (any four) OR Ans.: The eventual sector is in the form of epidermal sector forming distinct. 	
	 ★ The exoskeleton is in the form of epidermal scales, forming distinct plates. ★ Locomotor structures are in the form of a pair of forelimbs and a pair of hindlimbs, containing five digits each. 	
	★ Respiratory organs are a pair of lungs. 1/2 ★ Heart is three chambered. 1/2 ★ Nervous system has a brain, a spinal cord and twelve pairs of cranial	2
23.	 nerves. Oviparous. Fertilization is internal but development is external. Cold blooded animals. Body is divisible into head, trunk and tail. (any <i>four</i>) "In agriculture, growing genetically modified plants can reduce the water pollution caused by agricultural wastes." Justify this statement. Ans. : 	
	Genetically modified plants have the ability to resist / destroy insects (orpest resistant).1This reduces the use of insecticides. This reduces their flow into waterbodies.1	
	(any other suitable answer)	2

Qn. Nos.	Value Points	Total
25.	Draw the diagram showing the structure of HIV.	
	Ans. :	
	Here here here here here here here here	2
26	"I insite descent for all for the house of the second state of the	
20.	"Limited use of fossil fuels helps to reduce acid rain." Give scientific	
	reason for this statement.	
	Ans. :	
	★ Oxides of sulphur and nitrogen are released by the combustion of	
	fossil fuels. These cause acid rain.	
	★ Limited use of fossil fuels reduces the release of these oxides /	
	gases which cause acid rain. 1	2
30.	List the physical features of Neanderthal man.	
	List the physical features of Australopithecus.	
	Ans.:	
	★ He was rather short.	
	* Heavily built and exceedingly strong. $\frac{1}{2}$	
	★ Brow ridges were heavy. $\frac{1}{2}$	
	★ Forehead was sloping.	
	★ Small chin. $\frac{1}{2}$	
	★ Protruding jaws. $\frac{1}{2}$	0
	(any <i>four</i>) OR	4
	PR-S-12030(BIO)	1

Qn. Nos.	Value Points	Total
1.001	Ans. :	
	★ They were relatively short, about four and a half feet in height. $\frac{1}{2}$	
	★ Forehead was low. $\frac{1}{2}$	
	* The brain capacity was equal to modern gorilla. $\frac{1}{2}$	
	* They walked erect. $\frac{1}{2}$	
	★ The cranial capacity was only about one-third of modern man.	
	(Any four)	2
37.	Draw the diagram showing the structure of a dicot plant.	
40.	Name the components of Xylem tissue.	2
40.		
	Xvlem parenchyma	
	$\frac{1}{2}$	
	× Aylem libres $\frac{1}{2}$	
	* Xylem vessels $\frac{1}{2}$	
	* Tracheids. $\frac{1}{2}$	2

83-E (I	E (Bio) 6	
Qn. Nos.	Value Points	Total
42.	Why adrenaline is called the emergency hormone ?	
	Ans. :	
	Because in emergency situations like fear, anxiety, anger and emotional	
	stress, adrenaline is secreted in excess and prepares the body to face the	
	emergency situations properly.	2
43.	List the advantages of hydroponics.	
	Ans. :	
	★ Soil is not required $\frac{1}{2}$	
	★ Water requirement is very less $\frac{1}{2}$	
	★ Yields are stable and high $\frac{1}{2}$	
	★ There will be no weeds to remove $\frac{1}{2}$	
	★ Plants grow much healthier. (Any <i>four</i>)	2
46.	Mention the similarities and differences found in the striated muscle	
	fibres and the cardiac muscle fibres based on their structure.	
	Ans. : Similarities :	
	(i) The muscle fibres are elongated and cylindrical. 1	
	(ii) Cross bands are found. 1	
	Difference :	
	Striated muscle fibres are unbranched. Cardiac muscle fibres are	
	branched. The branches are connected with one another. 1	3
48.	Explain the process of replication of DNA.	
	OR	
	Explain the double helix structure of DNA molecule.	
	Ans. :	
	\star The process of replication begins with the breaking of hydrogen	
	bonds between the nitrogenous bases of complementary nucleotide	
	strands. The two strands of DNA helix get unwound to form a fork- like structure.	
	1	

PR-S-12030(BIO)

Qn. Nos.		Value Points	Total
	*	The two open strands serve as templates for the assembly of	
		nucleotides to form the daughter strands. The assembly of	
		nucleotides on the parent DNA template is brought about by some	
		enzymes. 1	
	*	The assembly of new bases against the exposed bases of parent	
		DNA strands takes place in a complementary mode. This process	
		continues till the two daughter DNA strands are formed.	3
		OR	
		Ans. :	
	*	The structure of DNA molecule resembles a spirally twisted ladder.	
		$\frac{1}{2}$	
	*	The molecule of DNA has a pair of polynucleotide chains running	
		antiparallel to each other. They are intertwined and helically coiled	
		around the other. $\frac{1}{2}$	
	*	Each nucleotide unit consists of deoxyribose sugar, phosphate and	
		nitrogenous base. $\frac{1}{2}$	
	*	Each strand of the ladder is made up of pentose sugar and	
		phosphate arranged alternatively. $\overline{2}$	
	*	The nitrogen bases connect the two opposite strands like the rungs	
		of a factor. $\overline{2}$	
	*	There are two types of purine bases namely adenine and guanine	
		and two types of pyrimidine bases namely cytosine and thymine.	
		Adenine pairs with thymine and guanine pairs with cytosine. $\frac{1}{2}$	3
